

Hot Billet Saw

Thin Kerf, Long Life Blades

The **GRANCO CLARK** Hot Billet Saw provides a major enhancement to consistent line throughput. Its servo controlled physical stop allows the heated billets to be cut to the exact length needed just before they enter the press.

A hot billet saw eliminates the need to maintain an expensive inventory of different length billets. Billets are cut to required size after heating. Hot-cutting also prevents a furnace full of wrong-sized billets.

Physical Stop Without Delay:

- Exact length billets
- Shock free pushback
- Stop functions as pushback - fast cycle times

Maximum Efficiency:

- Optional Integrated FusionBond® eliminates two-piece billets, reducing waste and increasing yields
- Industry-leading chip collection system

Enhanced Quality:

- Perfect square-cut Aluminum Log Saw
- Compensation cut
